

International Workshop on :**Human Dimension of Tropical Peatland
Under Global Environmental Changes****8 - 9 December 2004****Bogor Agricultural University - Bogor – Indonesia**<http://cimtrop.itgo.com/humdim.html>**INTRODUCTION**

Human influences on the transformations of ecosystems are the largest source of change on earth, affecting the ability of the environment to sustain life and human well-being. The changes of land use and management affect the states, properties, and functions of ecosystem. In turn, these consequences affect human well-being.

There is a need for improving the understanding of how human activities affect natural processes of the terrestrial biosphere, and an even greater need to evaluate the impacts of these changes.

The objectives of the workshop on the Human Dimension of Tropical Peatland under Global Environmental Changes are to (i) understand the actors in environmental change, (ii) evaluate the consequences of the change on human well-being, and (iii) develop a new method for land management based on sustainable development.

Global environmental changes affect the coupled human-environment system including biophysical alterations and social behaviour, lifestyle and culture. These, on the other hand, influence local land use decisions and the provision of ecosystem services. The resulting change to the environment can either increase or decrease the rate of environmental change. Links between decision-making, ecosystem services, and global environmental change define important pathways of feedback from intertwined human-environment activities from the local and regional scale to the global scales.

SCOPES DISCUSSIONS

The scope of discussions for the workshop are:

- S - 1. Actors in Environmental Changes
- S - 2. The Consequences of Environmental Changes on Human Well-being
- S - 3. Human Activities based on Environment Capability for Sustainable Development

KEYNOTE SPEAKERS

1. Prof. Dr. Isamu YAMADA, Head of Center for Southeast Asian Studies, Kyoto University.
2. Prof. Dr. Soekirman, Faculty of Agriculture, Bogor Agricultural University.

Title page: With concise title and author's name and affiliation.

Abstract: Summarizing the study in not more than 300 words, on a page by themselves.

Introduction: Include the problem addressed, current level of knowledge, the aim of the study, and hypotheses tested.

Materials and Methods: Includes all crucial information to allow replication of the study.

Results: Gives concise summary of data in tables and figures.

Discussion: Study on the larger context of human dimension of tropical peatland under global environmental changes.

Acknowledgement: Credits contributors of thought, expertise and fund.

References: Must substantially include the peer-reviewed primary literature.

Tables and Figures: Tables and figures should not duplicate figures and vice versa.
